

VIKING Liferaft, Open Reversible, 12 pers. - 12IBA

Material no.: L012IBA0

Open reversible liferaft. Packed in Cylindrical or low-profile FRP container, or a fabric valise.

The open reversible liferaft is intended for occupants likely to be exposed to bad weather conditions only for a short period of time before being located and picked up.

Being fully reversible, this type of liferaft can be used either way up, its floor being placed in-between the two buoyancy chambers. The open reversible liferaft is released from its cradle and thrown overboard, or slides automatically when released. Once waterborne the liferaft inflates on a hard pull of the painter line and is then ready for boarding.

VIKINGs Inflatable Buoyant Apparatus are approved by USCG according to Code of Federal Regulations (CFR).

VIKING open reversible liferaft type has a high durability with an expected lifespan of 15-20 years.
